

Our King's Caslon is a contemporary interpretation of a classic, based on found in old specimen books. This font family is suitable for all types of design and identity projects which require typographic sophistication. *Distinct and text variations emphasize our commitment to typographic finesse*, as well as an extended character set which includes Small Caps and non-lining numbers. The fonts are designed to work with programs that support OpenType features. The display version differs dramatically from the text type. While the former is designed to attract and charm, the latter is all about functionality. King's Caslon Display has an extrovert authority that is signified by high contrast between the strokes; there is elegance in the curves and in the treatment of the serifs. King's Caslon Text is the quiet cousin that will perform when you need to read page after page. There are no fussy design details; each stroke, each curve and each serif is drawn to provide best legibility at reading sizes. Whilst each font knows its place, together they are an unbeatable team.
