my friends didn't use capitals,
when sending me text messages,
e-mails and using all their digital toys.
at the beginning, I was feeling ignored.
but after time I thought, that...

I can do something for them.

and so, I've made r*edaktor*.

redaktor is a cute monospaced typeface, which has only lowercase characters and large x-height. If you want to write an uppercase character, you can't do it.

(ok, to be fair, there will be small underline, just to show you, what you have done...)

redaktor
