Indento™ is a multi-purpose modern geometric slab serif for headlines, posters, branding but fairly legible to be used as longer text. The straight and rounded corners combined with deep cuts and asymmetric serifs gives it a distinctive look while still keeping it's rigorousness and legibility.

The family consist of three weights, each with a companying italic. The extensive character set – 513 glyphs in each font – includes support for Central and Eastern European languages and OPENTYPE FEATURES like small caps, ligatures, fractions, slashed zero, stylistic alternates and more.

**Bold**

A is the third most common letter in English, and the second most common in Spanish and French. On average, about 8.2% of letters in English tend to be As, while the number is 6.2% in Spanish and 4% in French.

N represents the dental or alveolar nasal in virtually all languages that use the Latin alphabet. A common digraph with <n> is <ng>, which represents a velar nasal in a variety of languages, usually positioned word-finally in English.

The origin of F is the Semitic letter vâv that represented the sound /v/, and originally probably represented either a "hook" or a "club". It may have been based on a comparable Egyptian hieroglyph, such as that for "mace".

A foreign function interface (or FFI) is a mechanism by which a program written in one programming language can call routines or make use of services written in another. The term comes from the specification for Common Lisp, which explicitly refers to the language features for inter-language calls as such; the term is also used officially by the Haskell programming language.

*The Gregorian calendar attempts to keep the vernal equinox on or soon before March 21; hence it follows the vernal equinox year. The average length of this calendar's year is 365.2425 mean solar days (which can be thought of as 97 out of 400 years being leap years) whereas the vernal equinox year is 365.2424 days.*
